Materials designed to last and engineered to perform

The materials developed by Brady scientists are designed for a wide spectrum of applications and environments. Brady's in-depth knowledge of the conditions that products face requires extensive testing in harsh environments.

Our products are not only designed to withstand the harshest of environments, but also designed with the user in mind. We spend time getting to know our customers in order to understand your needs.

When it comes to identifying and tracking products, equipment and components, **Brady is the company you can trust** when performance matters most.

► Why label construction matters

When performance matters most, details matter, and that's why each label is built to meet specific application needs. Take a look at the label construction below to see just what goes into a reliable label.

1. Topcoat

Gives the label its color and finish, receives the print and increases resistance against weathering, chemicals and heat.

2. Substrate

Gives the label its form and provides mechanical properties, such as tensile strength and flexibility, and physical properties, such as chemical and temperature resistance.

3. Adhesive

Acrylic: Excellent adhesion characteristics for general application. Also ideal for high surface energy materials and rough surfaces.

Rubber: Stronger than acrylic for low-surface energy plastics. Sensitive to degradation from elevated temperatures and UV light.

4. Liner

A very thin carrier that protects the adhesive and allows for removability of the label.

► The right label material for your application

Based on your labeling needs and the engineering challenges you face each day, finding the right label is integral to the success of your design processes and overall business. Take a look at these label materials and the common applications they are used for:

Self-laminating wire and cable marker (B-427)

These labels feature a white printable area with a clear "tail" that over-laminates and protects printed text.

PermaSleeve® heat-shrinkable sleeve (B-342)

Sleeves can be moved along a cable or wire until heat shrunk into position, enabling you to adjust the sleeve position.

Wire and cable flags (B-425)

Flags have excellent solvent resistance and print performance, and can contain information or a barcode.

Safety labels (B-439)

Designed for applications requiring various colors, these labels are ideal for use in ambient conditions with limited solvent exposure.

Terminal block labels (B-498)

Labels that can be applied directly on the terminal block are a cost-effective alternative to pre-printed markers.

Component labels (B-423)

Small- and medium-sized components can be labeled with function or number information for faster maintenance and follow-up operations.

Wire tags (B-109 or B-508)

These rigid tags are attached with cable ties, offering space for identification data. Resistant to tearing, solvents and heat.

Wire wrap labels (B-498 or B-499)

Permanent or temporary wrap labels show the legend on all sides, accommodate various gauges and can be used for non-wire applications.

Raised panel labels (B-593)

As a cost-effective alternative to engraved phenolic legend plates, raised panel labels feature bright colors, clear text and a thicker, durable structure.

Barcode labels (B-483)

Barcode labels are ideal for rating and serial plates that have alphanumeric characters, barcodes, graphic symbols and logos that require nameplate quality.

ANSI/TIA-606-B Standard:

ANSI/TIA-606 is a voluntary standard that provides uniform labeling and record keeping guidelines for telecommunications and network systems in all types of facilities. It identifies what needs to be labeled and provides a recommended identification scheme that is compatible with the legacy ANSI/TIA/EIA-606-A Addendum 1, and the ISO/IEC TR14763-2-1 international identification scheme.

Key guidelines include:

- The size, color and contrast of labels should allow identifiers to be easily read and visible during normal maintenance
- Labels should be resistant to the environmental conditions at the point of installation and should last as long, or longer, than the labeled component
- Text on labels should be machine generated

▶ 1. On-site RFID label creation

Brady's RFID printing solution allows you to design, print and encode ATA-compliant RFID labels as a stand-alone system, or integrated into databases for automatic part birth-record generation, printing and encoding. This solution does not use middleware, but instead uses a non-proprietary document-based Bartender software.

Alloy tags

Alloy tags are ideal for use as a primary or secondary part marking. These tags may be printed and encoded in one easy step at the point of manufacture or repair. No topcoat is needed, and both printed and encoded data are verified compliant with the current version of the ATA Spec-2000. Alloy tags are also very flexible, which makes them ideal for curved surfaces.

Rigid tags

Rigid tags are a great fit for applications where a high-performance RFID tag is required, and the physical footprint available does not accommodate a traditional RFID tag. These tags perform very well under extreme conditions, and are available in both dual-record, and multi-record memory configurations. These tags are encoded using a handheld encoding method, which is supported with Brady ATA Tag Commander software.

Air tags

Air tags are commonly used for in-cabin applications, including safety equipment such as life vests and oxygen generators. These tags are available in a number of different configurations. Brady remains committed to innovation and continues to adapt the design of our labels to meet our customers' requests.

Electronics and Contract Manufacturing

Pre- and post-process traceability and identification labels

Brady has a long history of providing label materials that are engineered specifically for the benefits of traceability and compliance for electronic components. Take advantage of:

- Reduced errors and rework
- Production cost savings
- Hover-Davis compatibility
- Reduced warranty liabilities and returns
- Compliance with trade and substance regulations

These materials are designed for durability, consistency and compliance in high-performance environments and processing conditions, including cleaning, decontaminating and connecting each component. And, Brady offers products specifically designed for Printed Circuit Board (PCB) and component marking using laser systems for very small labels.

ESD: did you know?

Electrostatic Discharge (ESD) is one of the electronics industry's costliest causes of damage, and the use of standard labels in the manufacturing environment is a commonly overlooked potential source of ESD. Implementing an effective static control program that includes the use of static dissipative labels from Brady and follows industry guidelines, can help reduce the risk of damage to ESD-sensitive devices and components.

That's why we also offer two Brady Workstation Mobile Apps to enable you to quickly design labels on any iOS device, Android smartphone or Windows tablet and print those labels with your BMP®61 printer (Wi-Fi model required).

• **Brady Workstation Mobile Text Labels** enables you to design professional text-only labels on the spot with your mobile device.

• **Brady Workstation Mobile Print Partner** enables you to complete pre-defined fields with your mobile device using protected company label templates. Use Brady Workstation on a computer to create your own template and then open the template on your mobile device within the Brady Workstation Mobile Print Partner app from either a local disk (SD-card) or a cloud location, like Google Drive.

TLS2200® and TLS-PC Link™ Owners:

The TLS2200® and TLS-PC Link™ printers have been discontinued for the new and improved BMP®61 printer. But Brady continues to manufacture and stock label materials, ribbons and accessories for the TLS2200 printer. In fact, most of the TLS2200 label rolls are also compatible in the new BMP®61 printer.

1 Label Roll Design = 3 Printers*

Most TLS2200 label rolls are also compatible in the BMP61 and BMP71* label printers.

View all label rolls and compatibility on the following pages.

* Compatibility with BMP71 requires use of the BMP71 black media adapter and BMP71 firmware upgrade 1.13 or higher. View page 71 for more information

** Each printer requires its own printer-specific ribbon.

Self-Laminating Label Heights

If you know your wire diameter or wire circumference, you can easily determine the correct label height by using the formula below:

Step 1:
$$\frac{\text{wire dia.} \times 3.147 (\pi)}{\text{wire circumference}}$$

Step 2:
$$\frac{\text{wire circumference} \times 1.5}{\text{total label length}}$$

(Multiplying by 1.5 allows the label to wrap around the wire 1.5 times)

* Compatibility with BMP71 requires use of the BMP71 black media adapter.

Terminal Block / Patch Panel Materials

Terminal Block and Patch Panel Adhesive Strips (B-422, B-428, B-430, B-483 and B-498)

When using terminal block mode, printer can serialize and pre-space to your special thin widths to fit terminal blocks.

- **B-422 Glossy Polyester Material:** Permanent adhesive, good for powder-coated and textured surfaces. Best on flat surfaces. Temp. range: -40°F to 212°F (-40°C to 100°C). UL recognized.
- **B-428 Metallized Polyester Material:** Permanent adhesive, silver finish. Temp. range: -40°F to 176°F (-40°C to 80°C). UL recognized.
- **B-430 Clear Glossy Polyester Material:** Translucent, high performance polyester material with a glossy finish. Non-colored label with permanent adhesive. Good for general purpose thermal transfer printing.
- **B-483 Polyester Material:** Permanent adhesive for powder-coated and textured surfaces. Best on flat surfaces. Temp. range: -40°F to 248°F (-40°C to 120°C). UL recognized.
- **B-498 Repositionable Vinyl Cloth Material:** Special adhesive stays put, but marker can be removed and reapplied if necessary. Temp. range -40°F to 175°F (-40°C to 70°C). UL recognized.

Improved registration! The M61C- parts below come on a notched liner which helps the BMP61 printer achieve improved registration.

Circuit Board Materials

High Temperature Polyimides (B-724 and B-727)

Low profile polyimide and polyester materials that have static dissipative properties. Primarily used for printed circuit boards and electronic component labeling.

- **B-724 Polyimide Material:** Amber matte polyimide with permanent adhesive; can survive on the top or bottom side of PCBs through the solder process.
- **B-727 Glossy Polyimide Material:** White glossy polyimide with permanent adhesive; withstands wave solder environments for printed circuit board and electronic component preprocess labeling.

BMP®61 Print Ribbons

BMP®61 Print Ribbons

Print ribbons for the BMP61 are supplied in cartridge form and easily fit into the side of the printer and do not unravel or roll away when outside the printer.

Using the correct material and ribbon pair is critical in creating durable, long-lasting and smear-proof print. Use our Ribbon Compatibility Guide on the next page to help determine which ribbon is best suited for your material.

Ribbons listed below are for use in the BMP61 Printer ONLY.

Material	Color	Description	Ribbon Size
Black Ribbons			
M61-R4310	Black	R4300 Series Ribbon	2 in. x 75 ft. (50.8 mm x 22.85 m)
M61-R6010	Black	R6000 Series Ribbon	2 in. x 75 ft. (50.8 mm x 22.85 m)

M61-R4410-RD	Red	R4400 Series Ribbon	2 in. x 75 ft. (50.8 mm x 22.85 m)
M61-R4410-BL	Blue	R4400 Series Ribbon	2 in. x 75 ft. (50.8 mm x 22.85 m)

How many labels print per ribbon?

Have you ever wondered approx. how many labels you can print from one BMP61 ribbon? Try this formula:

Note: Our standard BMP61 ribbons are 900 in (75 ft) long.

Step 1: label height + 0.10 = X

Step 2: 900 inches ÷ X = total labels per ribbon

Example: PLT-19-422 is a 1.0 inch tall label
 1.0 inch label height + 0.10 = 1.10
 900 inches ÷ 1.10 = 818 labels per ribbon

TLS®2200 Owners: Print Ribbons

Although the TLS2200 and the BMP61 share label rolls, each printer requires its own printer-specific ribbon.

Ribbons listed below are for use in TLS2200 Printer ONLY.

Asset Tracking and Rating Plate Materials

Durable thermal transfer printable materials ensure that labels identifying assets and property will stay in place and printed information and barcodes will remain legible and scannable even though subjected to harsh environments.

- **B-428 Polyester:** Thermal transfer printable metallized polyester with matte finish. Withstands solvents and variable temperatures. Excellent for serial and rating plate applications with name-plate quality and a metal-looking finish.
- **B-430 Polyester:** Translucent, high performance polyester material with a glossy finish. Non-colored label with permanent adhesive. Good for general purpose thermal transfer printing.
- **B-483 Polyester:** White polyester thermal transfer label with glossy finish and aggressive adhesive specifically designed for powder coated surfaces.
- **B-486 Polyester:** Thermal transfer printable metallized polyester material. Designed for high adhesion to textured metals, powder coated surfaces and low surface energy plastics. Withstands numerous solvents and variable temperatures.

* User should test to the application. Print performance on a part that is smaller than a printer's minimum label dimension spec is dependent on multiple factors including print speed, qty in print run, heat setting and the size/layout of the printed elements.

Cryogenic Centrifuge and PCR Tube and Vial Labels (B-461, B-492 and B-499)

FreezerBondz™ labels can be applied to room temperature or to already frozen samples, with a small overlap. The label remains legible and will stick to the tube during processing, even when immersed in liquid or vapor phase nitrogen and ultra low temperature freezer storage.

- **B-461 Self-Laminating Polyester Material:** Ultra-thin polyester label with clear overlaminated tail that protects print and allows liquid levels to be visible
- **B-492 Polyester Material:** FreezerBondz™ ultra-thin white polyester for labeling frozen or room temperature vials, tubes and canes. Superior chemical and abrasion resistance.
- **B-499 Nylon Cloth Material:** Thick white nylon cloth for easy handling and conformability
- **B-7425 Polypropylene Material:** Ideal for labeling dry, room temperature specimen containers. Material withstands temperature ranges from -196°C to 121°C (-320°F to 248°F). Chemical resistance to ethanol, DMSO, IPS, short term xylene, 10% formalin, 50% acetic acid and toluene

FreezerBondz™ labels can be applied to room temperature or to already frozen samples, with a small overlap. The label remains legible and will stick to the tube during processing, even when immersed in liquid or vapor phase nitrogen and ultra low temperature freezer storage.

- **B-461 Self-Laminating Polyester:** Ultra-thin polyester label with clear overlaminating tail that protects print and allows liquid levels to be visible
- **B-490 Polyester:** White FreezerBondz™ label ideal for flat frozen surfaces. Adheres to frozen tube and vials when wrapped around itself by at least 1/8".
- **B-492 Polyester:** FreezerBondz™ ultra-thin white polyester label for labeling of frosted/frozen or room temperature vials, tubes and canes. Superior chemical and abrasion resistance.
- **B-7425 Polypropylene:** Ideal for labeling dry, room temperature specimen containers. Material withstands temperature ranges from -196°C to 121°C (-320°F to 248°F). Chemical resistance to ethanol, DMSO, IPS, short term xylene, 10% formalin, 50% acetic acid and toluene

Calculate how many labels per THT ribbon:

Standard THT ribbons are 984 ft long (unless otherwise noted).

Step 1: 984 feet = 11,808 inches

Step 2: 11,808 inches
÷ label vertical repeat
= total label rows per ribbon

Step 3: total label rows per ribbon
x number of labels across
= total labels per ribbon

Paper Materials

Paper is an economical and environmentally friendly labeling solution for warehouse, shipping, work-in-process and tamper-proof applications. Brady paper materials are ideal for short-term to moderate durations and offer a variety of characteristics including self-destructive, permanent adhesive, repositionable, removable or dissolve in water. Paper labels are not recommended when chemical, abrasion, or high heat are present.

Printer Compatibility

The following pages contain 3" core label rolls that are designed for use in these printers unless otherwise noted.

B-813 and B-816 Direct Thermal Paper Material

Color: White Finish: Matte

Direct thermal printable, paper material is an economical alternative to thermal transfer solutions for short-term labeling applications. Direct thermal printing is ribbonless and does not leave behind a carbon copy of the printed label information. **NOT recommended for use outdoors or in high temperature applications.*

3" Core Materials - Polyester

Polyester Materials

Polyester labels are widely used for identification based on their mechanical strength, high heat tolerance, general chemical resistance, and compatibility with various protective, functional and aesthetic coatings. Brady polyester materials are designed for use in barcode labeling, traceability, regulatory and compliance, product identification, rating plates, serialization and specimen identification. An all-purpose material, polyester labels can be easily customized to perform in almost any environment.

Printer Compatibility

The following pages contain 3" core label rolls that are designed for use in these printers unless otherwise noted.

3" Core Materials - Polyester

B-8117 Polyester Material

Color: Black Finish: Matte

Ultra-durable black polyester labels have excellent print durability, barcode readability and aesthetics. The black color is achieved through the adhesive layer, rather than the topcoat, which results in more robust color permanence. Color is sealed inside the label construction, increasing color durability. Powerful combination of topcoat and the R6800 series ribbon produces superior print durability against both abrasions and harsh fluids. Material consistently achieves barcode grade B or greater.

B-992 Glossy Fluid Line ID Tape

Self-laminating fluid line tape (B-992) is a glossy polyester tape with permanent, pressure sensitive acrylic adhesive. It can also have a clear tail for self-laminating the printed legend to provide additional durability. In addition, these tapes can eliminate the need for painting, hot stamping and etching of rigid tube identification.

Specifications:

LMA-MF099 LMA-MF094C
LMA-MF092B FMS-3099A
LMA-MF093C

Ribbon compatibility:

R6000 standard series

Series 1 Fluid Line Tape

Continuous 1" laminated tape fits various diameter tubes and pipes.

- Preprinted with MIL-STD-1247C colors and symbols.

Series 2 Fluid Line Tape

Continuous 2.5" tape fits various diameter tubes and pipes.

- Preprinted with MIL-STD-1247C colors and symbols.
- Has a blank white right side for part number, flow direction, torque value, or other information.

Series 3 Laminating Tape

Clear continuous tape used to laminate series 2 fluid line tapes.

Meets LMA-MF099 performance requirements.

Series 4 Fluid Line Tape

Die-cut, self-laminating, 2.5" wide tape designed to fit specific diameter pipes and tubes.

- Has a blank, 1.5" wide area on the right side of the label that fits printed information as needed and can be either yellow or white.
- Can be perforated or slit for easy separation of function and printable areas.
- Meets Bell 31-099 and Boeing Helicopter HS184.

Series 5 Fluid Line Tape

Die-cut, self-laminating, 2" wide tape is designed to fit specific diameter pipes and tubes.

- Has a blank, 1" wide area on the right side of the label to fit additional printed information as needed.
- Can be perforated or slit for easy positioning on the surface.
- Colors target MIL-STD-1247C specification.

B-999 Subsurface Printed Fluid Line ID Tape

The subsurface printed fluid line identification tape (B-999) is available in a continuous rollform or die-cut format. It is a subsurface printed, flexible, transparent polyester film tape with heat activated adhesive. The adhesive has superior resistance to fuels, oils, and hydraulic fluids when compared to typical pressure sensitive adhesives. The tape's low initial adhesion makes the tape easy to reposition when first applied.

- Type 1 - 1" wide without a printable zone
- Type 2 - 3" wide with dot matrix or thermal transfer printable zone
- Available in common color code legends
- Meets Boeing BPS-T-151 and colors target MIL-STD-1247C
- Ribbon Compatibility: R6000 Standard Series

Fluid Line Printable Label Options

Contact Brady at 1-888-272-3946 to order your custom fluid line tape.

Brady fluid line tapes are available with the symbols and colors needed to identify the most common contents of aircraft tubing. Some versions also feature an opaque, thermal transfer printable area allowing variable information to be added. Fluid line labels are available either subsurface printed or in a self-laminating format and are compliant to MIL-STD-1247D.

The images shown represent self-laminating label formats.

3" Core Materials - Metallized Polyester

Metallized Polyester Materials

Brady's metallized polyester labels extend the value of polyester to applications requiring a metallic, silver, or gray appearance. Available for a variety of surface types, these materials offer a wide service temperature range, chemical resistance, and abrasion resistance for asset and product identification that is appealing for customers in automotive, transportation, energy, and aerospace.

3" Core Materials - Raised Panel Polyester

Raised Panel Polyester Materials

Brady raised panel labels are foam-backed polyester with an aggressive, permanent adhesive. Thicker and more durable than a normal label, raised panel material is a cost-effective alternative to engraved legend plates and are ideal to identify industrial control panels, signal lights and other indoor components, as well as outdoor electrical boxes, instrument panels and more.

Printer Compatibility

The following pages contain 3" core label rolls that are designed for use in these printers unless otherwise noted.

3" Core Materials - Polyimide

Polyimide Materials

Polyimide labels are widely used for permanently marking electronics that experience extreme temperature exposures during the manufacturing process. Brady polyimide materials have been designed to survive solder reflow, harsh aqueous chemical cleaning and device testing by leveraging the enhanced stiffness, chemical resistance, large intrinsic dielectric strength and extremely high heat tolerance of high performance polyimide films. These labels are naturally flame retardant and are offered with matte or gloss topcoats and in low-profile and static-dissipative configurations.

▶ Printer Compatibility

The following pages contain 3" core label rolls that are designed for use in these printers unless otherwise noted.

B-717 Electrostatic Dissipative Polyimide Material

Color: White **Finish:** Gloss

High temperature white polyimide material (2 mil) with glossy finish. Features a permanent static dissipative adhesive and a static dissipative release liner. Withstands wave solder environments for printed circuit board and electronic component preprocess labeling. Surface resistivity values in the recommended range for dissipative ESD packaging materials. Also meets requirements of EIA-541 "Packaging Material Standards for ESD Sensitive Items."

Did You Know?

Brady teamed up with ZESTRON, Kyzen and market leaders in high precision cleaning process solutions, to conduct extensive chemical compatibility testing on the Brady line of polyimide labels, which are commonly used as printed circuit board (PCB) identification labels.

According to the test results, all Brady polyimide labels submitted can successfully withstand ZESTRON and Kyzen's latest cleaning chemicals - these test results are critically important to circuit board manufacturers, as they ensure that Brady polyimide labels will stay adhered and legible throughout the whole circuit board production process including in-line aqueous cleaning systems.

Electrostatic Dissipative (ESD) Labels

Brady electrostatic dissipative labels, or ESD labels, meet the requirements of ANSI/ESD S20.20 standard. ESD labels are designed to protect the static-sensitive components of your circuit boards. When labels are peeled off of their unique ESD liner, they produce only a low static discharge voltage.

Available in a variety of types and sizes, Brady ESD labels can help you reduce damages from static discharge and keep your product cost down.

3" Core Materials - Polyimide

B-719 Electrostatic Dissipative Polyimide Material

Color: White Finish: Matte

High temperature, low profile white polyimide material (1 mil) with a permanent static dissipative adhesive and static dissipative release liner. Similar to B-718, but with a matte topcoat, which prevents solder balls from sticking after molten wave solder exposure. Surface resistivity values in the recommended range for dissipative ESD packaging materials. Also meets requirements of EIA-541 "Packaging Material Standards for ESD Sensitive Items."

Custom Laser Engravable Traceability Labels

B-730: Black matte laser markable polyimide (PI)

B-731: Black matte electrostatic dissipative (ESD) laser markable (PI)

B-421: Black matte laser markable polyester (PET)

Laser marking or engraving is a complimentary process to thermal heat transfer. While laser engraving is slower than THT, it is second to none in print permanence. The printing process of these labels also creates a very high resolution print. So precise that it can reach up to 1200 dpi, making it ideal for the small font applications that are often required in electrical component boards.

Other features include:

- Repeated harsh aqueous cleaning resistance
- High temperature, wave soldering resistance up to 572° F (300° C)
- Custom sizes engineered-to-order and ready to ship in under 3 weeks
- Compatibility with most IR laser marking systems
- Optional ESD prevention layers
- Reduced rework issues related to direct laser marking board materials

3" Core Materials - Polypropylene

Polypropylene Materials

Polypropylene labels are used extensively for identifying products, assets, and objects where chemical resistance, general durability and conformability is required. Polypropylene is naturally flexible and does not use plasticizers that could otherwise seep into critical materials resulting in contaminating samples, equipment, experiments or food. Brady polypropylene materials are great for identifying and tracking items and assets in laboratory, medical, biological and food environments. They are also an economical solution for general applications where temperature extremes are limited.

Vinyl Materials

Vinyl labels are used in a variety of general purpose and outdoor identification applications. These labels offer excellent UV resistance for use on assets and articles that are exposed to the elements. These materials afford very good water and oil resistance and can be used on many different types of surfaces since their flexibility allows them to adhere to curved, non-uniform and rough surfaces. Additional configurations for color and adhesive options are available including repositionable, removable and tamper-proof.

3" Core Materials - Tamper-Indicating

Tamper-, Temperature- and Water-Indicating Materials

Tamper-indicating labels are high quality labels to protect against counterfeiting, diversion and tampering. Brady offers an assortment of standard and custom engineered indicating labels to meet your particular product protection needs. These tamper seals and tamper-indicating labels provide irreversible, visible evidence of tampering to protect against warranty fraud, product tampering, alteration, and misuse or asset theft. Tamper-indicating labels can protect your product's unique model and serial number as well as help reduce the chance of liability issues due to unauthorized service or misuse.

Custom Label Materials

B-335 VOID Footprint Polyester Material

B-335 is a super clear tamper-indicating label material that leaves a dry footprint (no sticky residue) when the label is removed. Upon attempted removal, the material layers split showing a hologram and VOID wallpaper pattern. In addition, the label cannot be stuck back down or reused. This non-typical tamper label material is ideal for an assortment of business issues where visible evidence of product opening or tampering is required.

B-366 Polypropylene

B-366 polypropylene material features diamonds with a clean removability coating that prevents any footprint or residue from being left behind. It's ideal for an improved consumer experience when opening a package or preserving package integrity for reuse when repackaging or inspecting a packaged product is required.

Contact Brady for more information about these custom materials.

3" Core Materials - Tamper-Indicating

B-7546 VOID Footprint Polyester Material

Color: White **Finish:** Gloss

White polyester tamper-indicating material with glossy finish. Leaves a "VOID" footprint when label is removed to prevent it from being reused. The adhesive does not allow for repositioning and requires minimal handling in order to prevent a premature "VOID" pattern.

A clear polyester tamper-indicating material with a glossy finish, used for any application requiring high performance with evidence of label removal. Designed to leave a "VOID" footprint when the label is removed. A "VOID" pattern will appear on the top surface of the label to prevent reuse. The adhesive nature of this product does not allow for repositioning and requires minimal handling in order to prevent prematurely exposed VOID pattern.

B-7511 Permanent Temperature-Indicating Labels

Pre-printed labels designed to document the temperature levels that a piece of equipment reaches during operation. When equipment reaches a certain temperature, the white area of label serves as a heat sensor and turns irreversibly black. The label acts as a permanent temperature recording, giving clear proof of the highest temperature attained for that piece of equipment.

3" Core Materials - Wire and Cable Labels

Wire and Cable Materials

Cable and wire labeling is critical in the identification, assembly and repair of electrical control panels, wire harnesses and data/telecommunications systems. It is an upfront cost that saves time and labor expenses when changes or repairs need to occur to the systems you work on. Brady wire and cable ID solutions include a wide range of materials and styles suitable for many different environments or applications.

Common Label Types

Self-Laminating Labels
Ideal for terminated cables or wires that may need additional abrasion or chemical resistance.

Wrap-Around Labels
Ideal for general marking of terminated or unterminated cables and wires that may be curved or become curved.

Cable Flags
Ideal for getting larger amounts of data on small diameter wire and cables such as fiber optic cables.

Non-Adhesive Tags
Ideal for multi-conductor cables or bundled wires/cables.

Heat-Shrink Tubing
Ideal for un-terminated wires or cables needing superior abrasion and chemical resistance.

3" Core Materials - Wire and Cable Labels

How to Select a Wire Marker

There are four main questions to ask yourself when you're starting the process of marking wires. These questions will help you select a wire marker that best suits your needs.

1. Are you marking the wire before termination?

Sleeve markers are generally used before termination because they must be slipped over the open end of the wire. These non-adhesive markers provide flexibility as they can be moved prior to being heat-shrunk. Once shrunk, these markers fit snugly around wires for permanent identification which will stand up to harsh environments. Self-laminating and wire-wrap labels can also be easily applied to terminal wires.

2. What gauge wire are you marking?

The outside diameter of the wire determines the diameter of the sleeve or the height of the label to be used.

3. Will you print your own or purchase preprinted ones?

Preprinted markers are available in a large variety of stock legends and custom legends are available for any large jobs. These markers come in a variety of packaging and formats for ease of use and ease of transport. They are ideal for any application.

Printable markers are meant to be printed with variable legends as needed. Various methods for this include: portable wire marking printers or computer software linked to thermal transfer, dot matrix, laser or ink-jet printers. An extensive array of sizes are available for every application. These printable markers offer the flexibility of printing legends on demand.

4. What environment will these wire markers be in?

It is extremely important to select a wire marker material that will last for your application. Avoid going through the trouble of marking only to have to do it all again because the correct material was not selected. Be sure to ask yourself these questions before you select your wire marker:

- Does it need to withstand contact with oil, water, chemicals or solvents?
- Are there self-extinguishing properties or requirements?
- Will the marking be exposed to high temperatures?
- Any industry or special specification requirements?
- Should it withstand dirt and environmental factors?

How to Select a Marker Size

Brady offers a variety of marker sizes for your wire marking needs. Please view the charts listed below to assist you in choosing the minimum recommended label height for your specific type of wire or cable that you are identifying.

Finding the correct label height for your self-laminating labels

If you know your wire diameter or wire circumference, you can easily determine the correct label.

Step 1: Wire Diameter
 $\times 3.14 (\pi)$
 = Wire Circumference

Step 2: Wire Circumference
 $\times 1.5$ (wraps 1.5 times around wire)
 = Total Label Length

3" Core Materials - Wire and Cable Labels

B-437 Topcoated Polyvinylfluoride Material

Color: White, Yellow

Finish: Matte

White or yellow polyvinylfluoride labels with a matte finish used most frequently in wire and cable identification applications where self-extinguishing features are required. This material utilizes a permanent acrylic adhesive for heavy-duty applications and is available in continuous or die-cut formats. Excellent resistance to water, oil and other common fluids.

PermaSleeve® Wire Marking Sleeves

Brady non-adhesive, printable heat-shrink wire marking sleeves fit snugly around wires or cables for maximum insulation protection. Their full-circle design provides fast and permanent wire marking. Clear, legible text can be printed on the sleeve with a Brady printer for reliable wire identification.

Brady heat-shrink sleeving materials excel in extreme environments, including temperature fluctuations and environments that require abrasion and chemical resistance. Brady offers a variety of materials available to print using thermal transfer and dot matrix printers.

Create your own suite by downloading apps individually

Have unique printing needs? Then download apps individually to create a custom Brady Workstation software solution that fits your printing applications.

Custom Designer Complete, customized label creation and editing

When you need full label creation capabilities to streamline your work and maximize your investment, Custom Designer is the app of choice. This premier label editing app includes all of the features of Custom Designer Lite, plus more barcodes, linked objects, label error checking, subscript/superscript, advanced editing tools and more. It also opens saved "graphics mode" files from LabelMark™ 5 and 6 without the need to convert.

Custom Designer Lite For simple text and barcode labels

When all you need is a simple label editor to add text, barcodes, graphics and shapes to your labels, Custom Designer Lite is the ideal tool. This "no frills" label editing app also lets you customize labels created in any other Brady Workstation app.

Text Labels For simple text-only wire and cable labels

When you need just a few lines of text for a wire or cable marker, the Text Labels app provides a simple, streamlined experience. It enables you to easily enter text and shows you how many lines of text will fit onto your label. If you have saved "line mode" files from LabelMark 5 and 6, this app fully supports opening them, with no conversion required.

Data Automation For automatic data import onto label templates

By automatically importing data onto a pre-defined label template and printing to a designated printer, this app allows label printing to seamlessly become a background process.

Scan and Print For easy label printing, triggered by a scanner

Collect label data and quickly apply it to a custom label template. Input can be from scanning barcodes on work orders, existing barcode labels, through keyboard entry, CSV files and/or custom scripts.

Arc Flash For NFPA compliant arc flash labels

Enter or import the assessment data for your equipment, then use the built-in templates to create and print your labels within a few simple clicks. App includes the latest 2015 updates to the NFPA 70E standard.

Express Signs For ISO, ANSI and OSHA safety and facility signs

Create safety and facility signs in minutes with predefined templates and layouts.

GHS Labels For GHS chemical labels

Creating GHS labels is now surprisingly simple. We've streamlined the process so you can easily enter the data from your SDS sheets once, then create and print any size GHS label at any time. Need Bilingual labels? Those are also supported in the app.

Asset Tags For asset tags or asset location labels

Streamline your asset identification process with the Asset Tags app. Select one of the commonly used layouts or import your own, enter your asset information and print. Data entry and printing are simple and unintentional changes to the templates are avoided, giving you standardized, professional asset tags or location labels in minutes.

Lockout Writer For simple lockout procedures

Save time and keep employees safe with the Lockout Writer app. This intuitive tool allows you to create, store and print simple lockout procedures, associated tags and energy source labels quickly and easily.

Arrow Tape For indicating pipe content flow

The Arrow Tape app uses predefined templates and layouts to help you create a strip of repeating arrows or icons to wrap around your pipe, showing content direction.

Pipemarker For ANSI/ASME pipemarkers

Complying with the ANSI/ASME 13.1 2007 pipe marking standard just got easier. The Pipemarker app allows you to create the customized pipe markers you need using predefined pipemarker templates. When finished, you can save them to use again in the future. Still following the 1996 version of the standard? The app supports that too.

Print Ruler For creating simple ruler labels

Easily print out a simple ruler that you can apply when and where you need it. "Brady Labs" are experimental apps or features not ready for full release.

Custom labeling extras

Template Editor

Create templates with locked or editable elements for consistent label creation.

For more consistent, accurate labels, the Template Editor add-on module available in Custom Designer, Custom Designer Lite and Text Labels editor apps allows you to set elements on your labels to be editable or locked. Once completed, your finished templates can be used in Print Partner or Data Automation apps to easily enter data onto your labels.

Excel Import

Import Excel data right onto your labels.

The Excel Import add-on module lets you import Excel data onto your labels, creating a separate label for each row in your spreadsheet. It supports both .xls and .xlsx formats, and works with Custom Designer, Custom Designer Lite, Text Labels and Print Partner apps.

Advanced Import

Easily import data from sources beyond Excel onto your labels.

When you need data import capabilities beyond Excel, use the Advanced Import add-on module. It creates a separate label for each item in the source data imported from .CSV, .TXT, Excel, MS Access, OLE DB and SQL. In addition, you can filter and sort, edit your SQL query or select individual records to import. This module works with Custom Designer, Custom Designer Lite, Text Labels and Print Partner apps.

21|12

Flip Flop

Automatically swap text items horizontally or vertically for DataComm labeling

Automatically swap text items horizontally or vertically on your labels with the Flip Flop add-on module. This is especially useful for DataComm applications when you just need to reorder your data. It works with Custom Designer, Custom Designer Lite and Text Labels apps.

123

Sequence

Easily create labels based on numeric and alphanumeric sequences.

With the Sequence add-on module, you can create a separate label for each value in a numeric or alphanumeric sequence. The sequence is defined by setting the starting number, total number of labels and increment interval. It works with Custom Designer, Custom Designer Lite, Text Labels and Print Partner apps.

A-123

Advanced Sequence

Create dependent and complex sequences for label creation.

Define a sequence with multiple counters and create a separate label for each value in the sequence with the Advanced Sequence add-on module. You can set each counter to increment independently or after a different counter has finished. It works with Custom Designer, Custom Designer Lite, Text Labels and Print Partner apps.

Tools and utilities

Batch Print

Efficiently group and print multiple files at once

The Batch Print app is your one-stop shop for grouping files to print together. By batching similar files together to print as one job, you can save ribbon and tape materials. And if you know you'll need to print the same files again, then you can save your jobs for faster reprints later.

Label Settings

Manage printing adjustments and custom label supplies.

Save time and reduce errors by setting default horizontal and vertical printing adjustments when using specific label supplies with a specific printer. The Label Settings app also allows you to define custom label supplies for use with Brady Workstation, similar to the "Custom Parts" feature in LabelMark.

Manage Files

Manage your Brady Workstation label files in one simple place.

Need to see and organize your label files from all of your apps in one place? The Manage Files app lets you manage all of your saved files from one screen, with options to preview, categorize and delete your files without going into each app separately.

Print Partner

Quickly create labels by filling in a template and printing

Save time, reduce errors and establish label consistency with the Print Partner app. Non-editable fields keep label layouts and information safe, while users can easily enter data into variable fields and then print. This app works with both Brady Workstation and LabelMark templates.

Network Printers

Easily connect to your printers via IP or DNS address.

Having trouble finding your networked Brady printer in Brady Workstation? Use the Network Printers app to manually find and connect to your networked printer using the IP or DNS address when Brady Workstation is unable to automatically detect your networked Brady printer.

LabelMark™ 4 Converter

For converting older LabelMark 4 files.

Do you have LabelMark 4 files? The LabelMark 4 Converter does just what it says - converts your files for use in Brady Workstation. You can convert a single file or all files in a single folder at once (LabelMark 5 and 6 files can be opened within Custom Designer, Custom Designer Pro or Text Labels without needing to convert).

Material Adhesion Comparison

Material Adhesion Comparison

Adhesion is the attraction between unlike materials. The strength of the adhesion is determined by the surface energy of the item being identified. The higher the surface energy, the greater the likelihood for the label to adhere. A lower surface energy product will be more difficult for a label to adhere.

These following charts are based on relative adhesion after 24 hour dwell within each given surface energy category.

SMOOTH SURFACE (High Surface Energy)

Typical surface energy levels for this category are above 50 Dynes/cm.

Surface Examples:
Stainless Steel Tin
Copper Glass
Aluminum Smooth Metal
Smooth Plastic

TEXTURED/ROUGH SURFACE (Medium Surface Energy)

Typical surface energy levels for this category are between 38-50 Dynes/cm.

Surface Examples:
Cast Metal Polyurethane
Nylon ABS
Alkyd Enamel Polycarbonate
Polyester PVC
Epoxy Paint Acrylic

HIGHLY TEXTURED SURFACE (Low Surface Energy)

Typical surface energy levels for low surface energy products are below 38 Dynes/cm.

Surface Examples:
Polystyrene Polypropylene
Acetal Fluorinated Polyethylene
Polyethylene Powder Coatings
Highly Textured Highly Textured ABS

Material/Surface Adhesion Ratings

Please see Brady Technical Data Sheets at BradyID.com/TechData for specific adhesion values. Testing in the specific application is recommended.
